

Tania St Vil

ttatisbatista@gmail.com | (341) 259-2212 | San Francisco | [linkedin.com/in/taniatatis](https://www.linkedin.com/in/taniatatis)

Summary

Computer Science student at San Francisco State University focused on software engineering and backend development. Experienced building web applications, REST APIs, data pipelines, and database backed systems. Seeking a Software Engineering internship to contribute to real world projects.

Education

San Francisco State University | San Francisco, CA

Bachelor of Science in Computer Science

August 2026 – May 2028

College of Marin | Kentfield, CA

Associate of Science in Computer Science

Jan 2023 – May 2026

Coursework: Assembly Language, Calculus III, Discrete Math, Linear Algebra, Differential Equations, Statistics, Data Structures & Algorithms, Advanced C++.

Activities: Active member of the Computer Science Club and Math Club.

Experience

Undergraduate Learning Assistant – Data Structures (CSC 220)

San Francisco State University

Aug 2026 – Present

- Support students during Data Structures lectures by guiding problem-solving activities and encouraging active participation in Java coursework.
- Collaborate with the course instructor in weekly preparation sessions to review upcoming topics, activities, and common student challenges.
- Apply strategies to help students strengthen their understanding of data structures, algorithms, and problem solving.

FlyRank.ai

Software Engineer Intern

Jul 2026 – Sep 2026

- Integrated new signals from online models into a page auction service, updating backend ranking logic and gating the changes behind an A/B test for later performance analysis.
- Refactored multiple services that fetched overlapping features into a shared processing workflow to reduce duplicated logic.
- Enhanced existing PySpark jobs by adding new metrics used to identify and prioritize 30,000+ website pages experiencing traffic declines.

College of Marin | Kentfield, CA

Student Ambassador

Jun 2024 – May 2026

- Led outreach initiatives that encouraged students from underrepresented communities to pursue Computer Science.
- Founded and ran a peer-mentoring program pairing current CS students with prospective students to support their transition into the major.

Projects

SocialBlog | Python, Flask, SQLAlchemy, Bootstrap 5, SQLite | [\[GitHub\]](#)

- Built the backend for a social blogging application with user authentication, posts, comments, likes, profile management, and pagination.
- Designed relational database models with SQLAlchemy and managed schema changes with Flask-Migrate, while enforcing user permissions and secure password hashing.
- Structured the Flask application using Blueprints and reusable components, then deployed and debugged the application in a production environment.

PickSense | Computer Vision / Deep Learning Project | [\[GitHub\]](#)

Python, PyTorch, EfficientNet-B2, Vision Transformer, Hugging Face

- Built a three-class image classifier to identify objects as using pretrained EfficientNet-B2 and ViT models.
- Prepared and evaluated a balanced 3,600-image dataset, comparing models by accuracy, size, and inference speed.
- Deployed the model on Hugging Face Spaces with GPU support and built a UI for performing image inferences.

AI Major Recommendation | Python, Flask, Gemini API, Pydantic, SQLite/PostgreSQL | [\[Live Demo\]](#) | [\[GitHub\]](#)

- Built and deployed a Flask backend that generates college-major recommendations through the Gemini API and supports follow-up chat.
- Added user accounts and persistent storage for profiles, recommendation history and feedback using SQLite locally and PostgreSQL in production.
- Improved recommendation reliability by checking and re-ranking AI results against a real U.S. majors dataset with earnings and employment data.

Skills

Programming Languages: C++, Python, Java, HTML, CSS

Tools & Frameworks: Flask, SQLAlchemy, SQL, PyTorch, FastAPI, Colab, TorchVision, scikit-learn

Mathematics: Linear Algebra, Differential Equations, Statistics, Multivariable Calculus,

Concepts: Data Structures, Algorithms, Problem Solving

Certifications

Hackathon (UC Berkeley, 2026) – Built an AI-powered platform designed to support low-resource languages.

Data Structures and Performance (Coursera, 2026) — studied Java data structures, algorithms, and Big-O analysis for efficient data processing.

PyTorch for Deep Learning Bootcamp (Udemy, 2026) — Built and trained deep learning models in PyTorch through hands-on projects.

Foundations of AI Engineering (CodePath, 2026) — Built AI-integrated software, learned ML fundamentals, RAG, agents, and AI safety techniques.
