Summary

Computer Science student at SF State focused on backend and ML engineering. Experienced building and deploying web services, REST APIs, database-backed applications, and machine learning models. Seeking a software, backend, or ML engineering internship where I can contribute to real projects and grow as an engineer.

Projects

[SocialBlog](#) | **Python, Flask, SQLAlchemy, Bootstrap 5, SQLite** | [\[GitHub\]](#)

- Built the backend for a social blogging application with user authentication, posts, comments, likes, profile management, and pagination.
- Designed relational database models with SQLAlchemy and managed schema changes with Flask-Migrate, while enforcing user permissions and secure password hashing.
- Structured the Flask application using Blueprints and reusable components, then deployed and debugged the application in a production environment.

[AI Major Recommendation](#) | **Python, Flask, Gemini API, Pydantic, SQLite/PostgreSQL** | [\[Live Demo\]](#) | [\[GitHub\]](#)

- Built and deployed a Flask backend that generates college-major recommendations through the Gemini API and supports follow-up chat to refine results.
- Added optional user accounts and persistent storage for profiles, recommendation history, sessions, and feedback using SQLite locally and PostgreSQL in production.
- Improved recommendation reliability by checking and re-ranking AI results against a real U.S. majors dataset with earnings and employment data.

PickSense | **PyTorch, Vision Transformers, FastAPI, OpenLORIS** | [\[GitHub\]](#)

- Developed a Vision Transformer from scratch in PyTorch to assess object visibility in robotic environments, starting with classification of clear, partially occluded, and heavily occluded objects.
- Benchmarked the model against pretrained CNN architectures and evaluated performance using F1-score.
- Building an inference demo with confidence calibration and attention-map visualizations.

Experience

FlyRank.ai

Machine Learning Intern

Jul 2026 – Present

- Built Python data-analysis scripts to identify and prioritize website pages losing traffic, processing large volumes of records and documenting findings for the engineering team.
- Designed a data-cleaning and feature-engineering pipeline that transformed raw records into structured, model-ready datasets.
- Trained and evaluated three classification models on unseen client data alongside senior engineers, wiring different feature sets into the pipeline.
- Benchmarked model versions on offline metrics and helped ship the top performer into the pipeline that ranks which pages the team reviews first.

College of Marin | Kentfield, CA

Student Ambassador

Jun 2024 – May 2026

- Led outreach initiatives that encouraged students from underrepresented communities to pursue Computer Science.
- Founded and ran a peer-mentoring program pairing current CS students with prospective students to support their transition into the major.

Education

San Francisco State University | San Francisco, CA

Bachelor of Science in Computer Science

August 2026

College of Marin | Kentfield, CA

Associate of Science in Computer Science

Jan 2023 – May 2026

Coursework: Assembly Language, Calculus III, Discrete Math, Linear Algebra, Differential Equations, Statistics, Data Structures & Algorithms, Advanced C++.

Activities: Active member of the Computer Science Club and Math Club.

Skills

Programming Languages: Python, Java, C++, HTML, CSS

Tools & Frameworks: Flask, FastAPI, SQLAlchemy, SQL, PostgreSQL, SQLite, REST APIs, Git, PyTorch, scikit-learn

Mathematics: Linear Algebra, Differential Equations, Statistics, Multivariable Calculus

Concepts: Data Structures, Algorithms, OOP, REST APIs, Databases, Problem Solving

Certifications

Flask for Python (Udemy, 2024) — Built a full social-network app with authentication, blueprints, and SQL.

Intro to Front-End Development (Coursera, 2023) — HTML, CSS, and UI frameworks for modern web design.

Hackathon (UC Berkeley, 2026) — Built an AI-powered platform designed to support low-resource languages.
